The Bond is a fascinating exploration of humanity's eternal bond with animals and an urgent call to answer the needs of millions of at-risk creatures. Both sobering and uplifting, *The Bond* argues that humans have an instinctive connection with animals—a connection Wayne Pacelle has felt acutely for as long as he can remember. The book looks at the origins of the human-animal bond, discusses the severing of that bond in the industrial era, and presents a workable vision of growing economies free from the harsh exploitation of animals. So many cruelties are inflicted on animals, but the good news is that we humans have the power to turn this situation around.

During his seventeen years with The Humane Society of the United States, including seven as president and CEO, Wayne Pacelle has played a leading role in transforming the organization, the nation's largest animal protection charity, into a dynamic public force and voice for all animals. He has been profiled in *The New York Times*, *The Wall Street Journal*, *The Washington Post*, and *The Los Angeles Times*, and has appeared on almost all of the major network television programs, from *60 Minutes* to the *PBS NewsHour*. He received his B.A. in history and studies in the environment from Yale University in 1987.
